

Nikhil Jain

Graduation Year: 1996

Experience: 21 Years

Organization with Designation: Chief Manager in Product Development Department
Siemens Ltd, Nashik

Nikhil Jain Says:

In my early phase of life, in school time only, I was fascinated by electronics and electrical machines and watching my dad doing that engineering stuff at home, I decided finally to become an Engineer and that too in Electronics stream. After few discussions and coming to know about the good reputation of KKWCoE, the day came when I took admission to this college in July 1992. 27 July 1992 was the first day of my Engineering in KKWCoE. By the end of first week itself, I became sure that my decision of taking admission to KKWCoE was right. I met few classmates, who became my good friends for life, all the teachers, who became the lighthouse for my future life and the college itself which provided all the required facilities and ingredients for me to become Successful Engineer and a good human being. The college staff, teachers, Labs everything was available and ready to solve any queries I had. Whenever I wanted to see a concept working, I could use the labs, take help of teachers and get the concept deep rooted in mind, which cannot be forgotten. This helped me a lot in my early phase of career as a R&D Engineer in Siemens LTD. The opportunity of facing the campus interview of Siemens and getting selected there also came from KKWCoE and I was fortunate to get selected for a job I always dreamt of. R& D in Electronic Field and that too in a Multinational like Siemens. What else I could have asked for.... Today I am working in Siemens LTD. Nashik, as a Chief Manager in Product Development Department, nearing about 22 years since I joined, but whenever I have to look back, I always find my college, my teachers and my friends from Engineering college standing behind me, motivating me to do further better in life and career, I would like to sincerely thank, all the teachers, staff and Management of KKWCoE for helping me achieve my dreams as an engineer and a good life.
