Broadband Strip Line Fed MSA for Biotelemetry Applications

Prof. S. S. Dongare (Dept of Electronics Engg.)

(Presented in IEEE Conference organized by Department of Electronics and Communication Engineering, Adhiparasakthi Engineering College during 3rd to 5th April 2013)

Abstract:- In this paper, design of microstrip patch antenna with destructive (reduced) ground plane is proposed. Parametric study is carried out by changing the gap distance between patch & destructive ground plane, strip line width and feed position of microstrip line with respect to radiating patch and its effect on performance parameters of MSA is observed. Design is simulated using IE3D software based on MoM. Measured and simulated return loss bandwidths are 895 MHz and 1.107 GHz respectively. Obtained radiation pattern is in broadside direction. Radiation and Antenna Efficiency are 77.32 % and 76.6 %. Other parameters are within the specified limit which makes MSA suitable for Biotelemetry applications.
