■ Abstracts of papers presented during Feb. 2020: Incorporating E-assessment tools in teaching for effective and authentic assessment.

S.B. Sangle, Dr. K.N. Nandurkar, Dr. P.J. Pawar (Presented at The Seventh International Conference on Transformations in Engineering Education (ICTIEE' 2020) hosted at Anurag Group of Institutions, Hyderabad, January 5-8, 2020)

Abstract: Throughout most of the 20th century, classroom assessment was considered as a mechanism for providing an index of learning, and it followed a predictable pattern: teachers taught, tested the students' knowledge of the subject, made judgements about students' achievement based on the testing, and then moved on to the next unit of work. But these conventional assessment techniques have some limitations like teacher gets feedback of his teaching and diagnosis of student learning at the semester end. Many teachers are now adapting the formative assessment to get the instant feedback of his/ her teaching as well as student learning. It is said that, assessment works best when its purpose is clear, and when it is carefully designed to fit that purpose. But when we have to go for formative assessment by conventional pen and paper method, it takes a lot time and also teacher have to analyse the inputs obtained from the students which may reduce teacher efficiency and increase the chance of faulty output. Exactly where the E-assessment tools such as Edmodo, Edpuzzle, Pollseverywhere, testmoz etc. comes into the roll for effective solution for this problem. The present study investigates the use of different e-assessment tools to overcome the conventional assessment problems. The study describes the details of effective incorporation different open source tools like Edmodo, rubistar, Edpuzzle, Pollseverywhere, testmoz etc. in teaching. The use of these tools help to enhance the efficiency of teacher and understanding level of students as well as academic results.
