What is Big Data ?

Big data is a collection of large datasets that cannot be processed using traditional computing techniques. It is not a single technique or a tool, rather it has become a complete subject, which involves various tools, techniques and frameworks.

Black Box Data – It is a component of helicopter, airplanes, and jets, etc. It captures voices of recordings of microphones and earphones, and the performance information of the aircraft.

Social Media Data – Social media such as Facebook and Twitter hold information and the views of people across the globe.

Stock Exchange Data – The stock exchange data holds information about the 'buy' and 'sell' decisions of different companies made by the customers.
